

SERENITY

TREATMENT AFTERCARE

SEMI PERMANENT MAKE- UP

Careful attention needs to be taken when caring for your SPMU procedure. Within the next three days your procedure will lightly scab over then slough away, do not pick or pull at the treated area and if required only use aftercare creams provided by us. ONLY APPLY A FINE FILM. It will take 24 hours for the area to create a protective barrier; your final colour result will take 28 days. A retouch cannot in any circumstances take place until 28 days as scarring may occur. Your procedure will take three phases;

1) Heal, 2) Peel, 3) Fade.

DO NOT apply make up over the area for up to seven days post treatment. If aftercare is not followed procedures will not heal correctly and results will be poor.

Important Notes

The Red Cross has advised not to give blood for six months following a SPMU procedure, do not have any form of laser in the direct area of the SPMU as the pigment will alter to titanium dioxide in the pigment. For MRI scans inform the operator of your SPMU procedure, you may feel a slight tingling sensation in the area. SPMU shows as an artefact through these scanners. Ensure the procedure is healed before considering botox or collagen fillers in the direct area.

If you have any questions please call us on 01707651512

EYEBROWS

You will need to keep your brows dry for 5 days.

A solution will be applied to the brows after your treatment. This will create a membrane over the wound to help it heal. You must apply a thin layer of after care cream 1-2 a day on your brows for 5 days. Ensure no other creams, soaps, make up or cleaners touch the treated area for 5 days. Please avoid exercising as much as possible for this time.

Do not pick or pull at the treated area, swelling may appear in the next 24 hours which may distort the shape temporarily until it subsides.

After 5 days you can get your tattoo wet - be careful when drying the area as some scabbing will still be present. After 7 – 10 days your scabbing will have shed and the brows will have lightened. After 20 days the colour will resurface due to the healing process of the skin. You will need a top up appointment after your first procedure 4-6 weeks later.

It is important to follow these instructions to ensure the best results for your Semi Permanent Make Up.

It is important to follow these instructions to ensure the best results for your Semi Permanent Make Up.

LIPS

Apply a fine film of aftercare cream with a cotton bud three times a day for up to a week, avoid spicy or citrus foods for seven days, be careful when brushing teeth as toothpaste can fade colour during the healing process. On day three your lip colour will start to flake away, do not be alarmed if the line or part of has faded or disappeared, This is usual in the lip healing process due to the lips being a membrane. By day 10 you will see the line start to reappear and the colour brighten up to three months after.

EYELINER

From waking the day after this procedure the area may be swollen or puffy. The reason for this is lymphatic fluid flows to the area to heal where the skin has been broken, when you are up and about the puffiness will reduce as lymphatic drainage will occur.

If you experience any discomfort in the next 24 hours a cold compress may be applied to the area. Do not apply any aftercare creams to the eyeliners: do not wear make up of any kind for at least 5 days. Do not pick at the area as this will cause gaps in the liner. Water or tears will wash pigment away within the first week so please be aware.
