

GENERAL AFTERCARE

- Avoid touching/picking at the treated area
- Do not pick any scabs that may form
- Do not use make up or perfumed products on the treated area for 24 hours
- No deodorant for 24 hours if the underarm has been treated
- Avoid heat treatments and swimming for at least 24 hours

SKIN TAGS

Small skin tags will crust over and fall off within a few days and leave fresh pink skin underneath. The area will then take around 2-3 weeks to heal over and re-pigment back to normal.

Large skin tags will have left a small crust behind when you leave your appointment. Please follow the same aftercare.

THREAD VEINS/BLOOD SPOTS

These will form a crust over the treated area which can last for up to 2 weeks. They can sometimes look more red than normal while they are healing. Blood spots can go a grey colour and then back to red

before the colour drains. Larger blood spots may need a second treatment as with some thread veins.

MILIA

These will go white and flatten down over the next few hours. A small scab or crust will form over the top and could take up to 2 weeks to come away.

Please ensure you follow the correct aftercare for best healing results.
